

Safety

The belt system has been comfort tested by the Swedish National Road and Transport Research Institute (VTI). The tests show that crash test dummies weighing 22, 34 and 75 kg remain fixed to the seat at full brake from 90 km/h.

The belt system

- Can be fitted in all vehicles with seats where there is an opening between seat and backrest.
- Can be fitted in both front and back seats (but not in fixed back seats where special adaptation is required).
- Can be used in child safety car seats (forward-facing) that have an opening between the seat and the back.
- Can be used in conjunction with a belt cushion.
- Can be fitted in all wheelchairs with a fixed back and an opening between the seat and the backrest.

CARE BELT®

Careva system

POSTURE BELTS

CARE BELT[®] system

- posture belts for a better sitting position

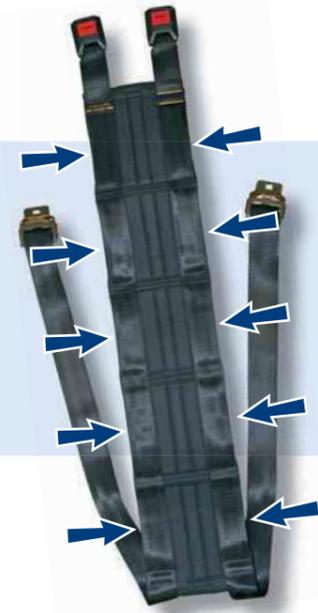

The Spinal Belt is strapped around the backrest and has 5 grooves, in which the posture belts are mounted.

It is simple and quick to buckle and unbuckle the belts.

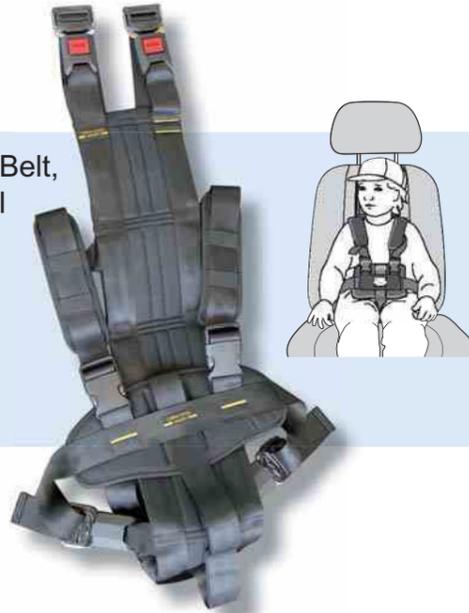

The Careva belt is CE- marked (which indicates product compliance with the EU medical aids directive).

The Spinal Belt

Combination Belt, kit with Spinal Belt included

Thoracic Belt

T-Belt

The mobility-impaired often require extra support or restraint to ensure a positive sitting position in cars, wheelchairs, child car safety seats, etc.

The Spinal Belt forms the basic structure of the belt system and is strapped around the backrest of the seat. After that a suitable posture belt is mounted in the grooves of the Spinal Belt, to achieve an upright body position. To provide the best possible fit, the belts are ordered by size; Small, Medium or Large and in some models by length.

Note! The vehicle seat belt must always be used.

The Careva belt System is complementary to the vehicle seat-belt and helps support the body to an upright position.

The Careva Belt system assures the driver that the passenger is sitting in an optimal position. An upright body position is important in order to optimize the function of the vehicle seat-belt, in case of a crash.

The belts are available in black and can be machine washed in 40 degrees, provided that the metal buckles are removed to spare the washing machine.

The Careva Belt can be used together with a seatbelt cushion and /or a car safety seat (provided that it has an opening between backrest and seat).

The system is also a great help for Taxi and Mobility services and can quickly and easily be mounted and remounted in the different vehicles.

To prevent active individuals from unbuckling their belts during the ride, a basic lock of 150 cm is available for buckling behind the backrest.

A long Basic Lock of 150 cm is available for buckling behind the backrest.
